

CLAIM

1. A disposable toilet bowl for care for receiving and storing excrements discharged from the anus of a disabled person, comprising:

a rod-like anus application member (3) which fits into a groove (20) between the buttocks (19) around a person's anus (17) and is filled with a fluid;

an excrements passage hole (4) which is provided so as to extend through the center of the anus application member (3) and one end of which is applied to the anus (17) when the anus application member (3) is fitted into the groove (20) between the buttocks (19);

a flexible sheet-like pad (8) which supports the anus application member (3) from the bottom thereof;

fixing means provided on the pad (8) for holding the state that said anus application member (3) is fitted into the groove (20) between the buttocks (19);

and a bag body (15) which is communicated with the excrements passage hole (4), of which upper end edge is fixed around the central hole (9) of the pad (8), and which receives internally the excrements discharged from the person's anus (17) through the excrement's passage hole (4) and the hole (9) of the pad (8).
